MODULE 9 – ADVANCED CLASSIFICATION, AND LABELLING, FOR SUPPLY

Correct classification of products is the key to preparing good Safety Data Sheets. This module will build on the knowledge gained in Module 7 (Basic Classification) and equip delegates to deal with more complex classifications, including more complex preparations and products with multiple hazards. There will be some increased emphasis on environmental hazards in the light of the CHIP 3.2 Regulations. Delegates will then be shown how to apply classification data to the labelling situation.

Delegates should be aware that this module does not address GHS classification issues – this area will be the subject of future modules.

Who should attend?

This module is mainly aimed at Safety Data Sheet writers and it will be especially useful to those coming into the field for the first time and for those wishing to brush up their skills.

It will be assumed that delegates have either attended Module 7, or have an equivalent level of pre-existing knowledge.

Benefits of attending

Attendance on this series of modules will ensure that **your** SDSs meet the increasing expectations of both your customers and the regulators. To ensure the most effective training with optimum involvement in participative exercises, there will be a limit of 14 on the number of students.

IOSH members are entitled to include this module in their continuing professional development records.

Comments from previous delegates on previous presentations of this training module

“Good trainer knowledge, good worked examples”

“Appropriate and relevant”

“Relaxed, informal, nicely paced and interesting. Help always on hand.”

“This was a clear and precise presentation”

What you will learn

The module will include sessions covering the following topics:

- Classification of complex preparations
Considering formulations, and data availability for products with single physical, health or environmental hazards and for products with multiple hazards, including exercises from data given;
- Introduction to labelling
Legislative background, required content of labels, size and application of labels, EC-label, data sources;
- Use of classification data
The hierarchy of symbols, selection of Risk and Safety phrases, including short exercises;
- Special labelling situations
Products supplied to the general public, special label phrases and the language of labels, including exercises for more complex products;
- Recording and consistency of data
Due diligence, audit trails, version control, recording of data to justify decisions, ensuring consistency with other documentation including Section 15 of the SDS.

Participants are asked to bring a copy of the CHIP 2002 regulations (SI 2002 No 1689), as amended, and the “Approved guide to the classification and labelling of substances and preparations dangerous for supply” (L131), the “Approved Supply List” (L142) and the current Occupational Exposure Limits booklet (EH40).

Module Tutor

This module will be given by Dr Stuart Longworth. After over 30 years experience with multinational chemical companies in research and regulatory affairs, Stuart is now a health and safety consultant, specialising in areas related to safety data sheets and chemical regulatory legislation.

NOTE: Please feel free to print out this brochure and forward copies to personnel of your own or any other company who you feel might appreciate receiving it.
